## PROFILE

I completed my A/Is in the Physical Science stream (English medium) at Gampaha Bandaranayake College and am currently pursuing a Computer Science degree at SLIIT (University of Bedfordshire, UK). I'm a responsible and organized individual with a strong interest in web development, actively seeking my first opportunity to gain experience and grow in the field.

## EDUCATION

### Bsc(Hons) Computer Science - University Of Bedfordshire

2025

I am currently pursuing a BSc (Hons) degree in Computer Science from the University of Bedfordshire through SLIIT City University and have successfully completed almost two years. Through coursework and projects, I am developing skills in software development, database management, and problem solving, while exploring areas like AI, data structures, cybersecurity, and cloud computing, preparing me for a career in the evolving field of computer science.

### IDM Nations Campus - E Kids and Teens

2019

I have completed a diploma in E-Kids and Teens offered by IDM Nations Campus, which provided me with foundational knowledge in computer technology. This program equipped me with essential skills in areas such as computer fundamentals, basic software applications, internet usage, and digital literacy.

### BritishWay English Academy

2019

I have successfully completed a diploma in English at the British Way English Academy. This diploma program equipped me with a comprehensive understanding of the English language, including grammar, vocabulary, writing, speaking, and comprehension skills.

### DIGI Max Edu LK

2018

I have successfully completed a diploma in Java programming and web application development at DIG IMAX EDU LK. This diploma program provided me with comprehensive training in Java programming language and the development of web applications using Java technologies.

## PROJECTS

---

### ■ E Commerce Book Shop Website

2024

Designed and developed a full-stack e-commerce website for an online bookstore as a university project. The project involved architecting a normalized MySQL database to efficiently manage inventory, user profiles, and order records, while server-side PHP scripts handled critical business logic, including user authentication, session management for shopping cart operations, and processing transactions.

### ■ POS System Using Java

2018

Engineered a comprehensive Point-of-Sale (POS) system in Java to streamline retail operations. The application featured robust modules for real-time inventory tracking, supplier management, sales processing, and detailed reporting. This full-featured system was designed to manage the complete business workflow, demonstrating strong object-oriented design principles and a focus on functionality and usability.
